Northern Children Get Training

Deaf native children from the N.W.T. demonstrate their knowledge of sentence structure. Such an achievement is the result of fingerspelling communication employed as a visual aid at the Alberta School for the Deaf.

DEAF INDIAN AND Eskimo children from various communities and settlements in the Northwest Territories, are being accommodated and educated at the Alberta School for the Deaf in Edmonton. Their enrolment at the school is made possible through a joint agreement with the Alberta Department of Education and the Department of Indian Affairs and Northern Development.

At present there are six Indian and Eskimo children from the N.W.T. region registered at the School for the Deaf, with as yet an additional number scheduled for enrolment in the 1968-69 term. Of the six students now at the school, three are of Indian extraction and the other three are Eskimo children. They range in age from five to 17 years of age.

Indian and Eskimo children admitted to the School for the Deaf from the N.W.T. become resident students. Referrals for admission are received, indirectly from social workers, and through a process of individual assessment the child may then be placed in residence for the school term. School policy dictates that the child be socially and emotionally mature.

Instruction given to the deaf native children is the same given to all students at the Alberta School for the Deaf. The language of instruction is English, and for all pupils the educational program employs a combined method of teaching. Instruction by oral means is supplemented by finger spelling as a visual aid to learning. Linked with the teaching of communication skills at the School is an instructional program which matches as closely as possible the Alberta provincial courses of study and is inclusive of Grade Ten. Pre-vocational courses in Home Economics, Industrial Arts and Business Education are also part of the curriculum.

The Alberta School for the Deaf also maintains a hearing aid rental and servicing department to fully meet the needs of those students with partial hearing.

Those students who take the academic program at the Alberta School for the Deaf will prepare themselves for Provincial Examinations as well as possible admission to Gallaudet College in Washington State, the only college in North America offering a higher program of education for the deaf. Those showing a high aptitude in the vocational program at the school may find themselves moving into direct employment, or possibly taking limited courses at other vocational training centres.

Adoption Totals Hit New High As More Children Surrendered

THE ALBERTA DEPARTMENT of Public Welfare in its review of the 1967 adoption program in the province, reports that a record number of children were placed for adoption.

According to statistics of the Child Welfare Branch, a total of 1,448 children found new homes in 1967, as compared to 1,347 going for adoption in 1966. Although the total number of adoptions for the year was encouraging, the figure was still overshadowed by the number of children who became wards through surrender and through the district courts. A total of 1,316 children were surrendered for adoption, and another 1,060 children were made temporary wards through the court. At the beginning of 1968, 6,426 children were under the care of the Department, 1,681 in adoption homes and 4,745 in foster homes and institutions.

The volume of adoption applications has continued to be high, and adoption placements have correspondingly increased. A noticeable change has occurred in the adoption picture since last fall. Girls for adoption placement are in short supply and couples wishing to adopt a girl, particularly in the age group under 10 years of age, can expect to wait for some time for placement of a child in their home. There continues to be a substantial number of part Indian boys over the age of six, needing adoption homes. A number of younger boys with minor health problems are very badly in need of homes.

Preventive Social Service Programs Available On Local Authority Basis

Children attending the Kikino Play School were enrolled for a six-week period. Some of the subjects taught were reading, writing and arithmetic; all at the Pre-school or Kindergarten level.

PREVENTIVE SOCIAL SERVICE programs initiated under individual partnership agreements between various municipalities and the Alberta Department of Public Welfare, are now available to 70 per cent of the province's population.

Established in mid-1966, the preventive service scheme currently reaches into seventeen municipal areas in the province. This year, new Preventive Social Service programs are being considered in additional areas such as Athabasca, High Prairie, Stony Plain and Lacombe.

Preventive Social Service programs are designed to develop community resources. This is the first legislation in Canada specifically aimed at preventing future public dependency by giving Alberta families the opportunity to live more happily and more creatively. In short it is a province-wide endeavor to prevent family breakdowns from occurring. The Alberta Department of Public Welfare absorbs 80 per cent of the cost of all approved projects undertaken, as well as 80 per cent of administration costs involved. The remaining 20 per cent is the responsibility of the participating municipality. This cost sharing formula is applied only after all other sources

of funds have been included such as United Funds, donations, fees for service, etc.

For each Preventive Social Service program there is a local authority council with a specially appointed director. This authority may appoint an advisory committee to be responsible for the creation or expansion of Preventive Social Service projects in a certain community. The director will survey the needs of an area, and then employ volunteer and all possible resources within the community. In major cities having the greatest density of population, the municipal government becomes the appropriate local authority for Preventive Social Services. Rurally, and particularly in more sparsely populated areas of the province, an amalgamation of municipalities, including towns and villages, may share cost and services as one unit. However, only one authority is selected to represent the amalgamated area.

Preventive Social Service projects will vary from one community to the next. Head start programs, homemaker services, family counselling services and child day-care centres for working mothers are only a few of the projects which have and might be introduced. Common to Preventive Social Service programs in major cities is the establishment of a community information and referral centre, the most recent being the A.I.D. Centre (Advice, Information and Direction Centre) opened in Calgary in December of 1967.

Among the first head start projects to be launched on the rural scene, was the Kikino School Readiness Pilot Project on the Beaver Metis Colony approximately 130 miles northeast of Edmonton. This project saw the creation of a group of 24 Metis children in the Kikino Community Hall. The children attended for a period of six weeks during the summer of 1967, and were of such an age that they would be entering Grade One in the fall of the same year. The personnel for the program consisted of one accredited teacher, four Metis mothers from the community, two girls from the Alberta Service Corps, a custodian and four fathers who served as volunteer drivers to and from the school. ●

Vehicle Mirrors and Markers Are Now Mandatory By Law

TWO NEW REGULATIONS regarding motor vehicle safety devices became effective January 1, 1968. A solid triangle marker must be displayed by all vehicles operating on any highway in the province at speeds of under 25 miles per hour. The foot-high triangle is of fluorescent yellow-orange, and must be displayed as high as possible on the vehicle.

Now all new vehicles sold in Alberta must be equipped with side-mounted rear-view mirrors. This mirror must be located on the left side of the vehicle in such a manner as to give the driver a clear view of the roadways to the rear left of the vehicle. It is in addition to the normal rear-view mirror.

Librarianship, Dance, Visual Arts, Drama, Music, Scholarships Total \$47,500.00

FOR FIFTEEN YEARS, scholarships have been made available to promising students in Alberta who are presently engaged in, or who plan a career in, specific cultural fields. In the last few years, the number of applications for scholarships has greatly increased, and the demand for the services of students having completed their education in these fields has increased proportionately.

Recognizing these increases, the Cultural Development Branch of the Department of the Provincial Secretary is this year offering a record total amount of \$47,500 for scholarships in Visual Arts and Crafts, Dance, Drama, Music and Librarianship. Scholarship amounts will vary between \$100 and \$500 each, and are awarded as follows:

I. Visual Arts and Crafts - Total \$7,500

Scholarship awards will be made to promising art students enrolled, or intending to enroll, in the Alberta College of Art, Calgary; the Department of Fine Arts, University of Alberta, Edmonton or the University of Calgary; or any other approved courses, art schools or universities of the students' choice. Also eligible are students enrolled, or intending to enroll, in the Faculty of Education, University of Alberta, Edmonton, or the University of Calgary, and majoring in art; or any other approved university.

Promising craft students enrolled, or intending to enroll, in the Alberta College of Art, Calgary; or any other approved course, institute or craft school, may be eligible for Scholarship Awards.

Deadline for receipt of individual's completed application form and work is May 31, 1968.

II. Dance - Total \$7,500

Details of the dance scholarships were released earlier because of an earlier deadline for receipt of applications - April 1, 1968.

III. Drama - Total \$10,000

Scholarships are open to all Albertans working in the field of drama who have shown some indication of promise coupled with an adequate background in drama, are being accepted by a recognized summer or full-term drama school or university, and are able to present a comprehensive idea of their future plans. They must be 18 years of age or over and must supply three references with their application. Acceptance of a scholarship implies an understanding by the candidate to return to Alberta should a suitable opportunity present itself.

Deadline for receipt of completed applications is May 1, 1968.

IV. Librarianship - Total \$7,500

Scholarships to the value of \$500 each will be awarded to graduates of a University or recognized standing, or students in their final year who expect to graduate in the current year. Applicants must be residents of Alberta, have had some experience in working in a library and be prepared to enter the library profession in Alberta if a suitable position is available.

Deadline for receipt of completed applications is May 1, 1968.

V. Music - \$15,000

Music scholarships are open to all Albertans working in the field of music who show some indication of promise, together with an adequate musical background, and are able to offer a comprehensive presentation of their future plans. There is no age restriction, but applicants must intend studying in any approved course or with an approved music teacher. Three references must accompany each application.

Deadline for receipt of completed applications is May 1, 1968.

Further details and application forms may be obtained from Cultural Affairs Branch, Department of Provincial Secretary, Financial Building, Edmonton. ●

Training Facilities At Glenrose Hospital Made Available To Teaching Students In Medicine And Health Sciences

THE GLENROSE HOSPITAL in Edmonton has signed an affiliation agreement with The University of Alberta under which the unique training facilities at the hospital will become available for the training of medical and paramedical students. The Glenrose, operated under a Board of Management appointed by the Alberta Minister of Health, is a hospital providing for the treatment, care and education of handicapped persons. The School Hospital Program for Handicapped Children is one of only three such institutions in the entire country.

Terms of the recent agreement provide for full co-operation in the education of students in the fields of medicine and the health sciences. Under the agreement the Glenrose will be available not only for undergraduate training but also to provide training programs in graduate clinical specialties.

Glenrose has been active in the training of physiotherapists and other medical people since its inception but the new agreement makes it possible for students in almost all faculties to avail themselves of the special facilities that the hospital provides. Teaching clinics will be held for students in faculties other than medicine.

Teachers, by way of an example, will be able to gain experience in dealing with emotionally disturbed children in the classrooms at Glenrose. Facilities also exist for the training of dentists and dental auxiliaries in the field of child dentistry.

One of the main features of the agreement is that it opens the way for university professors to locate at the hospital, using Glenrose as the focal point of their teaching activities rather than being established in the University and making frequent visits to the Glenrose. The agreement also makes possible a greater degree of co-operation in the development of medical research and in-patient care and community service between the two institutions. Some of the medical staff of the hospital serve as members of the Faculty of Medicine at the University and

In addition to providing active treatment and convalescent facilities, Glenrose Hospital offers continuing education to all handicapped children. Its unique role in this field makes Glenrose a particularly valuable facility for the training of teachers as well as medical personnel.

faculty members are on the medical staff of the hospital.

Glenrose Hospital operates as a convalescent and rehabilitation centre as well as providing active treatment and regular education to handi-

capped children. For this reason it is in a uniquely advantageous position to offer the University a particularly valuable facility as well as provide unusually good teaching and research possibilities.

SCHOLARSHIP GRANTS TO BE INCREASED NEXT YEAR BY NEW PROVINCIAL REGULATION

EFFECTIVE APRIL 1, this year, the Students' Assistance Board of the Alberta Department of Education will introduce major changes in regulations governing financial assistance to students. Province of Alberta graduate scholarships will be increased from \$2,500 to \$3,000, and from \$3,000 to \$3,600. Province of Alberta graduate fellowships, currently \$3,600, will be raised to \$4,200.

The new regulations will also provide Province of Alberta matriculation scholarships and undergraduate scholarships not exceeding \$100 to students having a matriculation average or previous year average of 80 per cent or better. These scholarships will be provided on the basis of academic achievement only. At the same time, new regulations will allow a student in financial need to apply for a Province of Alberta grant up to \$400, and loan assistance up to \$1,500 for single students and \$2,000 for married students if required.

After April 1, a new schedule will be added to the new regulations to provide grant and loan assistance to adult students attending high school. An adult student may be awarded a grant valued at \$50.00 to \$400.00 on the basis of past achievement and financial need. Single students may

5,184 Alberta Cattle Feeders Requested To Co-operate In Cattle-On-Feed Survey

APPROXIMATELY one-quarter of Alberta's cattle feeders are presently involved in testing a new and improved method of obtaining cattle-on-feed estimates through a survey being conducted by the Dominion Bureau of Statistics with the assistance of the Economics Division, Alberta Department of Agriculture.

Pilot surveys on this subject, conducted since 1964 in Ontario and the prairie provinces, have not proved satisfactory. The present survey is the result of requests received from livestock associations and other farm groups for more accurate information. Alberta was chosen as the testing ground and, if successful, the method will be adopted by other provinces across Canada. The purpose of the survey is to determine an efficient and feasible method of providing Alberta feeder cattle suppliers, feedlot operators and

others involved in marketing cattle, with information that will allow them to take advantage of optimum marketing conditions.

The sampling procedure used classified cattle feeding operation into nine categories on the basis of size. These nine categories were further divided into 144 sub-groups. Thirty-six names were chosen at random for each sub-group, making a total of 5,184 feeders to whom questionnaires were mailed. All recipients were urged to return the questionnaire to Ottawa immediately. The Economic Division is handling follow-up enumeration of those larger feed lots (178 head or more) which have not yet replied.

"Within Our Borders" is a publication designed to acquaint the people of the Province with the administration of the Alberta Government.

There are no restrictions in the republishing of any material but a credit line would be appreciated.

Notice of change of address should be accompanied by the mailing address on the front of this issue. No charge is made for "Within Our Borders" and new readers are invited to forward their name and address to "Within Our Borders," Room 1618 Centennial Building, Edmonton.

AUTHORIZED AS SECOND CLASS MAIL. POST OFFICE DEPARTMENT, OTTAWA AND FOR PAYMENT OF POSTAGE IN CASH.

borrow up to \$1,000 and married students may borrow up to \$1,500 under the Alberta Students' Assistance Act on the basis of financial need either separately or in conjunction with a grant.

New regulations for the coming fiscal year also will see grant assistance for the first time going to students attending approved universities outside Alberta.

Millions Of Dollars Are Invested In Capital Outlay

With the assistance and encouragement of provincial and municipal trade development offices, and through the aggressive expansion of their own activities within Alberta, many firms have established new locations in the province, or expanded existing facilities. The following list of manufacturing construction is provided by the Alberta Bureau of Statistics on the basis of information available through a variety of sources. While not necessarily complete, it is indicative of industrial growth within the province.

(The following partial list has been compiled from newspaper clippings and Industrial Commissioners' reports.)
*On 1966 list as well

COMPANY	Expenditure Involved (\$)	Products or Type of Operation	Stage of Development As of Dec. 31/67
*Hirmac Co., HIGH RIVER	100,000	Specialized Industrial and Commercial Equipment	Completed
Husky Trailers Ltd., EDMONTON	—	Trailer Manufacturers	Completed
*IKO Asphalt and Roofing Products Ltd., CALGARY	200,000 (Addition)	Roofing Products	Completed
James United Steel Ltd., CALGARY	150,000 (Addition)	Steel Fabrication	Completed
Johnson Manufacturing Co., EDMONTON	—	Picture Frames	Completed
King Seagrave Ltd., CALGARY	—	Assembly of Fire-fighting Equipment	Completed (renting)
Klassen Homes Ltd., CALGARY	300,000	Mobile Homes	Completed
P. Kruger Concrete Products Ltd., EDMONTON	18,000 (Equipment)	Concrete Products Manufacturing	Completed
La Fleche Bros. Ltd., EDMONTON	50,000	Tailors	Completed
Lennox Heating Industries, CALGARY	99,000 (Addition)	Assembly of Heating Products	Completed
Low-Cost Furniture Mfg. Co. Ltd., ST. PAUL	10,000	Unfinished Furniture and Custom Wood Products	Completed
L.F.K. Progressive Plastics, CALGARY	—	Plastic Tubing and Miscellaneous Plastic Products	Completed (renting)
Mariwill Signs Ltd., EDMONTON	—	Sign	Completed
Mark Products, CALGARY	—	Manufacturing Cable, Electronic Equipment and Geophysical Installations	Completed (renting)
*McCoy Brothers Ltd., EDMONTON	890,000 (Addition)	Machine Shop, Agricultural Implements, Trailer Hitches, Springs, Boxes and Frames	Completed
Mel's Lumber and Building Supplies Ltd., CALGARY	100,000	Truss Manufacturing	Completed

Alberta Waters Surveyed For Sport Fishing Capabilities

AN ACCELERATED PROGRAM to classify the sport-fishing capabilities of Alberta waters, particularly those of the more remote northern half of the province, has been undertaken by the Fish and Wildlife Division of the Alberta Department of Lands and Forests.

An agreement to conduct such a research study as part of the Canada Land Inventory under the Agricultural and Rural Development Act was concluded in 1967, with the cost to be met by the Federal Government.

Initial work being carried out during the winter includes compiling and classifying the information already available on many lakes and streams from previous studies by provincial fish and wildlife officers. Staff and equipment also are being assembled for field work in the coming spring and summer.

The survey for the classification of all waters will include physical and chemical features of lakes and streams, depth and area of lakes, the amount of dissolved nutrients necessary to support microscopic life, temperature and oxygen content of the water, and sampling of fish species present.

A number of benefits are expected to result from the classification. In addition to providing information on sport fishing capabilities for the Canadian Land Inventory, it will provide officials with an index of all Alberta waters, important to visiting tourists and local vacationers alike.

Information from the survey will allow the needs of fishermen to be better estimated, and the dollar income from sport fishing to be more closely gauged.

Enthusiasm for the progressive opening-up of more fishing waters in northern Alberta is expressed by Fish and Wildlife officials. Superb fishing is available at many lakes, virgin territory because of the lack of public access roads. A lucrative tourist business eventually may grow in the area, probably led by the opening of private fishing and hunting resorts.

It has been discovered that the value of sport fishing extends far beyond the actual activities of fishermen. An area known for fine fishing brings countless visitors not actually interested in fishing.

As an example, Stuart B. Smith, director of the Fish and Wildlife Division, recalls the case of a popular resort lake in a Canadian province, known for good fishing. One season it recorded 13,000 camper-nights attendance. The following year toxicant was used to kill off the fish in preparation for restocking. Attendance dropped to little more than 1,000

Classification of the sport-fishing capabilities of Alberta waters, particularly in the northern areas, is expected to lead to improved sport for fishermen.

camper-nights, though the lake as a family resort was even more attractive for swimming and water sports such as water-skiing without the congestion of fishing boats.

The year after the lake was restocked, attendance climbed to 20,000 camper-nights, although only a fraction of the holidayers were actually interested in fishing. Thus the attraction of good sport fishing cannot be over-rated.

The survey of sport fishing capabilities of Alberta waters is also expected to prove of value to the survey of recreational needs of tourist areas, being conducted by the Alberta Government Travel Bureau. ●

Three New Apprenticeship Trades Designated As Result Of Growing Demand For Skilled Men

THE APPRENTICESHIP Board of the Alberta Department of Labour is currently working towards the designation of three new apprenticeship trades for 1968.

Although regulations and training courses still have to be drawn up for the new trades, they are proposed for the trades of Instrument Mechanic, Electrical Mechanic and Resilient Floor Coverer.

Apprenticeship training for Instrument Mechanics is needed to satisfy the demands of the petroleum, chemical and pulp and paper industries for skilled instrument tradesmen.

Training will deal mainly with the techniques required for calibration, installation, maintenance and repair of both measuring and control instruments.

It is expected that the length of apprenticeship for Instrument Mechanic will be four years,

with eight weeks of trade school training being offered each year.

Apprenticeship training in the proposed designated trade of Electrical Mechanic will provide highly skilled workers for the rebuilding and repair of all classes of electric motors, generators and similar equipment.

It is anticipated that this apprenticeship trade will be a four year program with eight weeks of trade school training being provided each year.

The growing demand by floor covering contractors for qualified tradesmen to install carpeting, floor tile, linoleum and other types of resilient floor covering, has led to proposed designation of Resilient Floor Coverer as a new apprenticeship trade. However, the length of apprenticeship and the number of weeks of tech-

TRUCK MAXIMUM SPEED IS NOW UP TO 60 & 55 m.p.h. ON SOME ALBERTA HIGHWAYS

THE SPEED LIMIT for trucks has been increased on certain highways in Alberta.

On highways with 70 m.p.h. daytime auto speeds, trucks will have a 60 m.p.h. speed limit day and night.

On highways with 65 m.p.h. daytime auto speeds, trucks will have a 55 m.p.h. speed limit by day and night. ●

nical instruction per year has not yet been decided.

A program of apprenticeship training for each of these new trades is expected to be in effect for the 1968-69 training term.

The last time a new trade was designated by the Apprenticeship Board was in 1966. At that time the Board established regulations and a training program for roofer apprentices. ●

FAIRVIEW EXPERIMENT DRAWS INTERNATIONAL QUERIES

AN EXPERIMENTAL PROGRAM of confinement feeding of lambs at the Fairview Agricultural and Vocational College is drawing letters of inquiry and commendation from such widely separated areas as Nova Scotia and California. The Fairview College is one of three such institutions in the province operated by the Alberta Department of Agriculture.

Two separate plans are used at Fairview when lambs are fed in close confinement from an early weaning to market. One procedure allows ten square feet for each lamb while the other permits only four square feet per animal.

The lambs are maintained in pens with slotted floors. The floors are removable and are constructed of two-by-fours spaced five-eighths of an inch apart. The floors are raised about thirty inches above the ground.

No ill effects have been observed to develop as a result of the close quartering. In fact, just the opposite would appear to be true. Since constant and easy scrutiny is possible any appearance of disease is noted immediately.

In addition, because internal parasites depend upon a life cycle in pasture, the lambs do not fall prey to such afflictions as lungworms, stomachworms and tapeworms. Another obvious

advantage of such a system is the absence of any loss due to predators. Fencing and herding costs are also eliminated.

The dry lot system at Fairview is essentially a method of raising sheep without the need of fenced pastures for summer grazing. Lambs never leave the dry lot corral and ewes do not go out until fall. Since only a small flushing pasture is used, the cost of setting up a sheep flock is greatly reduced. A bonus advantage in having the flock under constant surveillance is that the ewes become very tame and any treatment or management chore can be easily accomplished. ●

A VARIETY OF provincial government agencies are shouldering the responsibility of implementing the first comprehensive rural development plan in Alberta, now in operation in Census Division 14 at a cost of \$6.9 million. The basic purpose of the project is to provide increased levels of income and a higher standard of living for residents of the district. The cost is shared by provincial and federal governments under the Agricultural and Rural Development Act.

The area involved is bounded on the west by Jasper National Park, on the north chiefly by the Athabasca River and on the east by the Pembina River. It measures some 11,760 square miles and supports a population of 19,282. Under the ARDA plan, assistance will be provided in land and forest development; increased education opportunities; water conservation measures and research into socio-economic problems and physical projects.

One of the major facets of the plan is the development of economic farm units through the farm consolidation program which has been operating now for nearly two years. This plan strives to increase the profitable utilization of available land by providing a link between those farmers who, for reasons of health, age or economy or involvement in a retraining program cannot continue to farm, and those who require more land for their operation. Those who are giving up their land are first of all counselled by the Regional Resource Co-ordinator and assisted in their proposed move and relocation. Then, they are encouraged to sell their land privately. If a buyer cannot be found, they may make application to have the farm purchased by the provincial government.

At this stage a Farm Adjustment Committee, unique in Canada, considers the application and makes recommendations on any further disposition of the land. This Farm Adjustment Committee is made up of four farm members and technical people from government agencies. If the committee recommends the application, and the Chairman of the Conservation & Utilization Committee approves, the farm is appraised and an offer is made. If the family accepts the offer, the land is transferred to the Alberta Department of Lands and Forests as Crown land. The family is paid a moving allowance over and above the purchase price. The Crown land then becomes available to those in the area who wish to expand their farming operations. The Farm Adjustment Committee is again called in to make a recommendation as to which farmer shall have the opportunity to buy or lease the land. The final decision is made by the Director of Lands. Assistance is also given to unsuccessful applicants to obtain alternate land if required.

Another responsibility of the Farm Adjustment Committee is the recommendation of all applications for land clearing within the project area. Under the plan, financial and technical assistance will be given to farmers to break and clear land to establish self-supporting farm units. This project, initiated by the people of the region, sets a maximum cost of \$40 per acre for clearing and breaking land. Twenty per cent of this, \$8 per acre, is paid by the farmer as a down payment. The remaining \$32 (to be obtained from a local lending agency) will be interest-free to the farmer for a maximum of five years. The repayment of principal can be deferred up to five years. Interest charges will be paid by the federal-provincial governments, except on arrears, and the repayment of principal will be guaranteed by the provincial government. Approval of applications for this type of loan must be received from the Farm Adjustment Committee, the Conservation and Utilization Branch of the Alberta Department of Agriculture, and the farmer's approved bank or lending agency.

\$6.9 Million To Boost Area Economy

ARDA Program Will Utilize Provincial Agencies and Plans

Increased development of the forest industry potential of Census Division 14 is another aspect of the ARDA program. The first step will be in the construction of roads which will give access to the forested areas. The road network will be constructed in such a way that it will serve recreational interests as well, wherever feasible. Denuded or understocked forest land will be regenerated and young growing stands in danger of stagnation due to overstocking will be thinned. This will involve the preparation of seed-bed and seeding of 2,600 acres per year and thinning of approximately 400 acres per year. These projects are expected to substantially increase present and future employment in the area through road construction, seeding, thinning and increased forest production from the improved timber stands. Work is supervised on all aspects by the Alberta Forest Services, Department of Lands and Forests.

Another physical project which has received approval under the ARDA program is the installation of a mechanical air-aqua system at Millers Lake. A typical Alberta stocked trout lake, it undergoes partial or complete loss of fish each winter due to low oxygen levels. The mechanical injection of oxygen into the water has proven to be a solution to this problem in other parts of Canada and will be tried here for the first time in Alberta under the direction

of the Fish and Wildlife Division of the Department of Lands and Forests.

Socio-economic problems are also of concern in the area and receive a great deal of attention under the program. One of these is the rehabilitation and retraining of adults who have become unemployed through industry fluctuation or lack of education. This is being carried out through a "Total Family Approach" plan, wherein the family as a whole is involved in the counselling process. Specialists from such government agencies as Manpower, and the Alberta Departments of Education, Agriculture and Welfare provide assistance in selection of types of training, location and family problems such as budgeting, home management and family health. Training does not begin for the applicant until the counsellors feel the family is able to make the transition to a new way of life without undue difficulty.

While the trainee is on course, a counsellor works closely with him and his family, providing advice and assistance where necessary. Presently, courses being taken by persons training under the program include academic upgrading from Grades VI to XII, Nursing Aide and Agriculture and Business Education courses.

To supplement present sources of development, a Job Corps Training School is being planned near Edson. Academic upgrading will be offered, along with job training which is designed to equip the trainee with skills necessary for obtaining work in the area.

Another program being implemented to assist homemakers in the region who require help and encouragement in solving the problems of family living is the "Home Visitors Program." This is a pilot project established in the Hinton and Edson districts under the supervision of the Alberta Regional Resource Development office. The home visitors are a group of interested local women who have taken a four-week training program to better equip them in the techniques they will require for their duties and to provide basic information on the subjects in which they will be assisting, such as home management. The particular situation will determine the type of help given by the home visitors. Some examples might include a large family living in a house without adequate space who wish advice on how to best utilize the room available; proper preparation of nutritional meals on a limited income; and food buymanship and budgeting.

Referral of a family to the Home Visitor Program is made through a government agency such as the local Health Unit or the Department of Public Welfare; or from interested persons such as teachers, members of the clergy, or the home visitors themselves. In most cases, the agency or individual making the referral will introduce the idea of a home visitor to the homemaker. It is then her decision as to whether or not she wishes to take advantage of the assistance offered.

Throughout the period designated for the projects under the comprehensive plan, a running evaluation of progress will be carried out by the Economics Division, Alberta Department of Agriculture. This will measure both regional development programs and the economic and sociological aspects of development. The project will evaluate the initial state of regional progress prior to the introduction of the ARDA pilot study in C.D. 14, and will attempt to measure the present status of regional development according to such criteria as the impact of education; improved health programs; movement of people within, and out of, agriculture; leadership and special participation training programs, and the social program and its effect. In addition, it will determine changes in the social and economic status of residents who participated in the program by comparing their present situation to previous standards and to the standards of those residents who did not participate.
